

Date Touches Rung at St.Bartholomew's Church Great Gransden

The first date touch was rung on 1st January 1994. The idea came to mind simply because there is a touch of 554 Cambridge Surprise Minor, which, added to two extents conveniently equalled 1994 changes. The touch is simple to call and so the first of many New Years Day touches was rung.

It was good to celebrate the New Year in this way and a good start to the year from the ringing point of view. As the end of 1994 approached I again considered the idea of ringing a date touch on New Years' Day and so started to work out how I could add one change in order to achieve the required length.

In the longer term adding one change each year would become quite a challenge. I needed to compose true touches whilst keeping within the accepted structure of whichever methods I chose to use. Clearly, I could not always use whole leads of methods to obtain the required number of changes, so part leads were considered, together with a variable hunt element for the treble. This meant that for a few changes the treble would become a working bell by using a "variable hunt" call (Single). Alternatively, or in addition, I could start the ringing at a different part of the lead, but where the treble is on the front. For example, start at the backstroke snap.

So, using these little "tricks" I could maintain the integrity of the method but manipulate the start or end to fulfil the required number of changes. Cambridge Surprise is the method mostly used. However, Ipswich is also used to obtain the correct number of changes and eradicate falseness if necessary. London has also been used at the beginning of one composition. In later years plain methods became the main part of the repertoire.

Proof was a challenge. My thanks to George Bonham, who, in the earlier years used to run the composition through Microsiril for me and fax a result to my workplace. Usually, the first draft of a composition was false, but Microsiril would at least indicate where the falseness was and I could adjust the calling to fix the problem.

Once the composition was completed and found to be true it was simple to organise the ringing. The New Years' Day quarter has been made up of a core group of ringers and I am grateful to them for agreeing to turn up every year and try my "ideas", some of which required some preparation by each ringer beforehand.

Ringing offers many challenges and composition is one of them. I have sometimes found it helpful to work from the end to the beginning as it were. I know the number of changes required, and sometimes design the touch around particular theme, for example, to finish with a plain course of the method. The

compositions are not difficult to call and I always try to incorporate groups of homes or wrongs to keep the calling as straight forward as possible.

The "funny" starts and finishes can create some interesting work for some bells. For example, in the 1995, the fourth made 3 blows in 3rds before going out, whereas the tenor comes in to make 2 in fourths, then switching to Cambridge continues with two in 3rds in the 3-4 places down. There are other little gems, worthy of note in the spliced Grandsire and Plain Bob minor used in the 2003 touch.

The following compositions are those for all the date touches rung at Great Gransden.

Date touch numbers 1 and No 8 are not my compositions.

First of treble bob - 1.
First date touch - 1 & 2

I found it impossible, and not desirable to add one change to an existing composition. Every year presents it own challenges. The 1995 touch (555 changes) uses London for 3 changes at the beginning, starting at the backstroke snap before the lead end. These 3 changes added to 23 leads of Cambridge gives the required length. ($23 \times 24 = 552 + 3 = 555$).

A Single called immediately - "Go London - Single" sets up the lead end for the rest of the touch. The Single is conventional 1234 notation. Cambridge is rung from that point to a very straightforward touch.

My ringing records show that several people in the village commented on how nice the ringing was.

During the ringing, heavy snow had fallen and it was white under foot when we left the church.

For this touch I needed 4 extra changes. I found the solution at the end of the lead. By using a variable hunt Single (notation 34) at the last lead end, I could take the treble out of the hunt. After four changes the treble would be back in first place at a backstroke lead. This change had to be Rounds, and so transposing the changes back to the lead end I found which row was required at that point. This gave me the coursing order needed at the end of the touch and I then worked the composition back to Rounds at the beginning.

All but one lead in this touch is Cambridge. I used one lead of Ipswich to adjust the length. I found that the Ipswich could be inserted at any point where there are two consecutive plain leads of Cambridge. I chose a course where the tenors were together to maximise the number of roll ups.

Of course, this touch could not be rung before the extents because of the variable hunt finish. The two extents rung were Cambridge and Ipswich Surprise.

Unfortunately, Sheila was unwell and could not ring in this attempt. I record that we had some excellent striking.

This date touch was more interesting. The 557 changes comprise all Primrose except one lead of Cambridge, and starts at backstroke. It finishes with the same variable hunt Single as used in the 1996 date touch. Because of the unconventional start and finish the two extents have to be inserted in the middle of the 557. This is most conveniently done at a course end when the tenors are together. Thereafter, standard callings may be used for the 720's. I chose to ring Cambridge for both.

The reader may notice that at the first Home the tenors are reversed, but the touch was composed so as to prevent 65's at backstroke.

This was also rung as a compliment to Stanley and Angela Griffiths on their golden wedding anniversary.

The 558 required for this date touch is a little unconventional because it used two types of Single. The one at the beginning of the touch is conventional (1234), and the one at the end the usual variable hunt type previously used. It starts at the backstroke snap before the lead end and straight into a Single. (As used in London in date touch No 2). The method is Cambridge and this is rung throughout expect for one lead of Ipswich to adjust the length. It should be noted that although length adjustment is made by substituting one "course splicer" with another, this is also used to prevent falseness.

The final lead end includes a variable hunt Single and the touch comes round in three changes. Once again, the changes were transposed back from the end to establish the required coursing order.

Longest length - 2

This touch followed the lines of previous compositions but included more changes of method than previous years. Spliced Cambridge and Primrose proved a challenge to the ringers and three attempts were made but we finally succeeded.

The start of the touch is rung with the 3 as the treble going down to the front at back stroke from Rounds, to the snap lead before the lead end. The variable hunt Single is at this point and puts the treble back in the "Hunt". The end is a conventional Single Wrong to bring it round in two changes.

The Millennium was a special occasion for us and by now the annual date touch was becoming a usual event in the calendar. As in previous years the touch had a variable hunt start and finish, four changes being rung either side of the main touch. This enabled a handstroke start so was slightly easier than in 1999. Cambridge and Ipswich were chosen and these were spliced successfully.

I remember struggling with this year - finally thinking that a backstroke start with little Bob may do the trick. Believe it or not, on the same day I saw Peter Hinton's touch on the Cambridge District web site and so used that instead of composing my own.

After an easy year in 2001 I was back to variable hunt for the 562 needed for this date touch. It has a standard Single Wrong finish but a total of 10 additional changes are required to get the length. To achieve this I start with the treble as 5th place Cambridge as it has just completed the dodge lead dodge part of the front work. Starting at backstroke it makes seconds, leads, - dodges at the snap and then dodges again at the variable hunt Single to put it back into the hunt.

The position in the Lead for the start makes for some interesting work for the other bells. e.g. the tenors make two dodges behind. Although these changes can be rung as Ipswich or Cambridge I called "Go Ipswich" because the first lead of the main composition is also Ipswich and this is less confusing for ringers negotiating the rather unconventional start.

This touch saw a break from tradition. This was mainly due to the difficulty in manipulating a lead of Cambridge, or Ipswich to get 11 additional changes. It can be done within the structure of the method but I found it to be false with every attempt. I was about to give up when I thought of splicing Grandsire Minor and Plain Bob Minor. A Grandsire start would enable the touch to come round at handstroke without falseness at beginning or end. (i.e. the last lead could be the first lead of Plain Bob rung backwards).

After considerable study, the result is (dare I say it) pure genius. There are just two leads of Grandsire - the first and last of the touch, the remaining being Plain Bob with two leads of Double Bob. These are required to get the right length and are carefully placed to avoid falseness.

This touch has been called three times, twice by myself and once by Lesley Ann Wilson who enquired about it having seen it on the EDA web page.

The composition is based on Wrong Home Wrong and is easy to remember. All bar one change of the plain course of Plain Bob can be found in the touch, which produces some interesting work at the two splices between Plain Bob and Grandsire.

This was the tenth consecutive New Year's Day date touch rung at Great Gransden.

Grandsire	35624		
	<u>(23456)</u>		

Once again - a very straight forward touch. Divisible by 12, 564 is an easy number for a composition of Plain Bob Minor. I wanted the touch to come round with the last lead of the plain course; hence the first call is "In" for the tenor.

Note: The Single Wrong and 4ths (near the end) have the same effect as two consecutive Bobs. However, two Bobs would cause falseness with row 71; hence the Singles. Composition proved on Byroc Minor.

A good composition for use in an ordinary quarter peal.

Start with Double Court at backstroke for one change using a Single. This gives 132456 at backstroke. Change to Plain Bob.

Use Plain Bob to established basic composition. i.e. 3-part WHW with S3 and S4 in the first two parts. Ring Single Oxford in these out of course courses to add 4x 65's of the front, and incidentally some of the music found in the plain course of Plain Bob.

In the last block, instead of calling S3 and S4 change to Single Oxford for the first course and call SH before the WHW. After the last SH ring two leads of Double Bob (call P.B.) to bring it round.

A nice little touch, but very easy this year.

900 changes Single Oxford, 720 St.Clements, 360 Plain Bob, 25 Double Court.

This was composed especially to celebrate the bi-centenary of the Battle of Trafalgar. It needs two extents and a 365. The 365 is a very straightforward composition of Cambridge Surprise. A backstroke start and variable hunt Single at the end.

My hope originally for 2006 was to use a variable hunt start and finish. However, although the structure of Cambridge lends itself to this in theory, I found that the first half of the first full lead was false with the second half of the penultimate lead. Four additional changes were planned at the beginning and 10 at the end. So even substituting one of the leads for Ipswich was not going to help. Other methods may be used but my knowledge of falseness was insufficient to try this. I recall having similar problem with my initial attempts for the date touch of 2003.

A much more straightforward approach was taken, and using a plain method, only two additional changes are required, i.e. 564 plus 2 changes. With the correct composition, the touch could be brought round at the snap lead at "wrong" using Cambridge.

The composition is an irregular 3-part based on the standard calling for a 540. Knowing that I needed coursing order 5234 at the end, I had to rearrange the standard touch (whw 2xSH). The first part is only 14 leads and includes 2 Singles Before. The other two parts are 15 leads each. Double Bob was used to adjust the touch to the correct length; Double Bob being a "course splicer" with Plain Bob prevents the introduction of falseness. It had to be used in the last course to ensure the touch was the correct length and to bring up the required 125364 change at the last lead end.

When we rang it I decided to ring the 566 first, breaking from tradition really because I would normally ring the odd part at the end. By ringing this first, the two changes of Cambridge rung at the end to bring it round, merge conventional into the start of the extent of Cambridge, but the ringers had to be briefed carefully on this.

This is the 13th consecutive New Year's Day date touch rung at Great Gransden

I found two solutions for this length. The first produces 23 out of the 24 56's at backstroke, and the second only 17. However, the second composition is more straightforward and does not have the slight challenge of adding the three leads of Double Bob, which are introduced to obtain the required length.

The alternative solution is shown in the second column. This is Plain Bob only but has only 17 x 56 roll ups, whereas the original solution has 23.

Composition No 2 was rung on 1st January 2007 at *Great Gransden*.

Proved by Ringing Master ®

There was an easy solution for this year. Start Plain Bob Minor with the 4 in the Hunt. When it leads the 2 makes second and the others dodge behind. Ring one more lead with the 4 in the Hunt and call variable hunt single at the lead end. This puts the treble back into the Hunt at a Home. Thereafter the composition is a one part and produces 18 roll ups.

Unfortunately Sheila had flu and was not able to ring. John Boocock stood in at short notice.

Quite tricky to find this one - I struggled with the falseness, even in Plain Bob. The Double Bob is used to get the length and overcome falseness. A nice backstroke start and a lead and a half with the 5 as the hunt bell. Thereafter it is plain sailing, the double bob adding a little interest because it is a rarely rung method.

Only 15 roll ups, so rather fewer than usual. The plan was to ring a 720 each of plain Bob and Double Bob. We rang the 569 successfully but there were several trips during the dodges on the Double Bob and I decided to switch back to plain Bob at the half way single. The result was 1577 changes Plain Bob and 432 of Double Bob.

Proved by Ringing Master ®

This touch was a challenge to compose. I needed an extra half lead (6 changes) of plain Bob Minor in order to get a 570. Starting with the Tenor in the hunt enabled this and originally I kept the variable hunt section to only two and a half leads. One has to be careful with falseness when using variable hunt, which cropped up in several places in the first draft touch of 510, but eventually I managed to get this as a true length. All I needed to do was insert an extra 60 changes by using 2 singles. However, I found this to be very false wherever I placed them. It seemed that a solution was not going to be possible, but then I decided add the 60 changes to the variable hunt section and this was successful.

The composition is mainly callings at W and H. The singles in the last parts are so placed to avoid falseness. The touch contains 19 56's, one of which is at backstroke in the VH section.

We have had a cold snowy Christmas. A heavy snow shower before the ringing covered the ground, but the weather afterwards was brilliant sunshine with a light dusting of snow still lying in the freezing temperature.

This one was not too difficult. Start at backstroke in Plain Bob, with the 3 in the Hunt. Call variable hunt single to get the treble back into the Hunt, and then use Wrong Home Wrong structure for the composition. Getting the right length was tricky, so I used Little Bob, but even then had to fiddle the final length by inserting a lead of Double Bob to reduce the original composition by 12 changes.

The Little and Double Bob are at the beginning so as to help the ringers!

This was very straightforward. A 572 of spliced Plain and little Bob Minor using a traditional calling of WHW. Ringing Plain Bob until the second Wrong, then changing to Little for the remaining part of the course to the part end. Repeat 5 times with Single half way and end. Note that the last course is PLP to achieve the correct length.

2012 Minor (4M) 572 spliced Plain and Little Bob Minor (444 Plain and 128 Little, 12 c.o.m.), 720 Norwich S. 720 Cambridge S.

A repeat of the date touch of the 1st January 2012.

This was rung because of the coincidence of the date 2012 on 2012 in 2012, apparently the last opportunity for a date touch with this degree of coincidence until 21st January 2101.

Some excellent striking and with thanks to our guest ringers, and especially to our local ringers for giving up their practice to enable us to indulge!

A backstroke start into Plain Bob and calls with the 4th as the treble, which keeps the tenor in 2nds or 3rds place bell for 3 leads. The variable hunt single brings the treble back into the Hunt and its straight forward from then. Four leads of Double Bob are required to get the length.

Not particularly good striking. Reminded me of *Gunfight* at the OK Coral with all the ricochets! Never mind, we at least were successful after losing it on New Year's Day due to a brainstorm by the conductor!

Start with the 3 in the Hunt. This is a ten-row lead. When the 3rd leads ring a single in 3-4. This puts the 5th into the Hunt. At the end of this lead call another single in 3-4 putting the treble back into the Hunt. Ring as normal thereafter.

Almost identical to the 2003 touch, starting and finishing with Grandsire with Plain Bob in between except one lead of Double Bob to get the right length and eliminate falseness. The last lead of Grandsire is the first lead of Plain Bob rung in reverse and so it comes round at handstroke in the correct number of changes.

An easy solution this year with no need for funny starts or finishes. I decided to compose a 576 of Plain Bob rather than use a traditional 576 of Cambridge. This was a little more difficult than I anticipated but I based it on WHW and found a satisfactory solution.

I asked Vanessa if she would like to ring, having asked her for a previous year but she was not well on the day and had to cry off, so it was a pleasure for her to be in the band. We had some excellent ringing

This was the 22nd New Year's Day date touch

576 is a standard length for minor so just one change was required to be added, which I did at the beginning by starting at backstroke plain hunting into 132546. Thereafter, ring a straight forward touch based on WHW.

This was the 23rd New Years' Day date touch. Lovely group of ringers!

Our 45th wedding anniversary was on 7th October. We were not able to ring together on that day as Sheila was ringing a quarter peal at Gransden and I was ringing a peal at Biggleswade. I had composed a touch of 532 changes Cambridge and Ipswich, which, with two extents would give a 1972, the year date we were married.

The composition is mostly Cambridge with Ipswich inserted to adjust to the correct length. The touch finishes with a variable hunt single, making Rounds in 4 rows after the lead end.

We had some excellent ringing which was very enjoyable. Very few method mistakes. Doughnuts and tea and a lovely relaxing social occasion were enjoyed at Nutbells afterwards.

1hr 7min

To celebrate Sheila and Phillip's 45th wedding anniversary.

This one was tricky, I needed an extra three rows and decided to begin the touch with these. Starting at backstroke, the treble leads and the tenor lies, giving the row 132546. The treble and 3, and the four and 6 dodge whilst 5 and 2 make 3rds and 4ths respectively. The variable hunt single puts the treble back into first at the next backstroke to give the row 135246.

This is an out of course row and basic Wrong Home Wrong calling could produce regular part ends. A single somewhere would put 2,3 and 4 back in course and so produce the remaining part ends.

The original touch was not long enough so I inserted 2 x S Before in the out of course part in such a way as to not produce falseness in the in-course block. This was successful. Unfortunately try as I might I could not get the right length and although the touch was true it was two leads too long. Substituting Plain Bob for Double Bob resolves this problem and two leads were inserted at convenient points to maximise music.

The ringing was very good throughout. There were some minor striking irregularities, but the rhythm was even and we all enjoyed it.

579 Plain Minor (2m)

This was our 25th New Year's Day date touch, and probably the final one. It has been a patient time especially on the two occasions when they were lost. We shall continue to ring on NYD but probably only a quarter peal. Many thanks to everyone who has helped with this project.

The composition was one of the easiest. I decided to ring a 1440 Cambridge S Minor (3w 2h x 3) and a 580 of Grandsire Doubles. The 1440 was very good with no method trips. I called Morrison's 240 and found that calling from the tenor although easy enough was somewhat challenging because I was not ringing a working bell. But it was successful. I followed the Morrison's with two extents of Plain Bob Doubles and finished the ringing with a 100 of Grandsire Doubles.

It was very enjoyable, and we enjoyed coffee and biscuits at Nutbells afterwards.

1hr 10min

For the New Year
25th New Year's Day date touch.

The previous date touch was the 25th rung on New Year's Day. We had no plans for another, which was fortunate because Covid came along and we were locked down on Jan 1st 2021, and a resurgence in 2022 prevented us from ringing at that time.

Then, someone (I think Rebecca) suggested that we ring one on 2202 2202, so the plan was made, a suitable 582 changes composed, and together with a 1440 Cambridge S. we rang a very creditable date touch on that date.

The 582 started with a lead of Plain Bob Minor, then switching into Plain Bob Doubles a 5th observation extent was rung to get 122 changes. This was followed by a standard 100 of PB5 and three extents (5ths obs) of Grandsire Doubles. The Cambridge was by Glen AA Taylor: 4,4,B, s3,I, (H) Six part omitting (H) in alternate parts.

The doubles ringing was very good indeed but we didn't quite find the rhythm as we changed into the Cambridge S Minor. The ringing was steady throughout but could just have been tidied up a little bit. I think some of us are a little out of practice, not having done a lot of performance ringing since March 2020. The ringing up and down in peal were excellent!

1hr 07min

A 91st birthday compliment to Hilary Laredo, Naomi's mum.
Specially organised to be rung on Two's-day 22 02 2022.

Sheila and I were married on 7th October 1972. Our Golden Wedding Anniversary could not be celebrated without some ringing and we organised a quarter peal on the day of 1272 Plain Bob Minor. This was planned to be Norwich with two other couples celebrating their Golden anniversary, but Anthony and Charlotte Smith caught Covid and had to drop out. John and Cass Boocock (also married 7th Oct 1972) were able to ring, and James Gamble and Catherina kindly stepped in at the last moment.

The next ringing celebration was on Saturday 8th when we rang a date touch of 1972 changes Cambridge Surprise Minot. This time with Rebecca and Mark, and Catherina and Naomi.

We rang a Bobs only standard 1440 (WWWHH x3) and a 532 composed by myself, to get the 1972. This has a variable hunt finish to get the length.

Very enjoyable and steady ringing. One trip in the 532 nearly jeopardised it but we settled again but with a 3-bell switch. I decided that the easiest place to correct the bells was at the course end and this was done successfully.

The ringing had settled and was good to the end.
